Geosystems Hellas Products

UFD Hexagon Add on from GSH

Developed by Geosystems Hellas, the **Urban Fabric Detection (UFD) Add-on for ERDAS Imagine** uses high-quality Sentinel-2 imagery to accurately map urbanized areas. As authorized reseller and consultant of **Hexagon Safety, Infrastructure & Geospatial** and Hexagon Airborne in Greece and Cyprus, Geosystems Hellas offers this add-on to support urban planners, GIS professionals, and researchers monitoring urban expansion and land-use change.

GOLDEN TWINS ESA Product

We are pleased to announce that **Golden Twins**, the **ESA Earth Observation Powered Situational Awareness** platform, has officially entered its beta phase, marking a key milestone toward operational deployment. The Golden Twins is offering a system-agnostic, multi-mission hosting platform built on open standards, the Golden Twins platform aims to bridge the gap in the national space program and serve as a competitive, low-cost solution for the emerging EO market.

Geosystems Hellas Projects

OCEANIDS Project and EARSC

February 2026

EARSC Response: Call for Evidence on the European Ocean Act

The European Association of Remote Sensing Companies ([EARSC](#)) represents the Earth Observation (EO) sector in Europe, with over 120 members from 25 countries covering the full EO services value chain. EARSC has closely followed the development of the EU Ocean Pact and strongly supports a coherent framework under the proposed European Ocean Act. EARSC particularly welcomes the intention to link the Act with the revision of the Maritime Spatial Planning Directive (MSPD) to strengthen regulatory coherence in the maritime sector.

Drawing on the operational experience of its members, EARSC seeks to highlight how EO data and services can support the implementation of the Ocean Act and related policies under the Ocean Pact.

EARSC launched an Oceans Ad Hoc Working Group to coordinate EO-sector input to European Commission consultations and calls for evidence. **Geosystems Hellas** was invited to contribute as **Coordinator** and domain expert, building on our role in the **OCEANIDS project**. Through this engagement, GSH supported EARSC's response to the European Commission Call for Evidence for the European Ocean Act (closed 9 February 2026), underscoring how high-quality geospatial data and innovative Earth Observation technologies strengthen integrated ocean monitoring.

TOPIO at Participatory Conference

On 7 December, we presented the TOPIO project at the 3rd Participatory Conference at the Agricultural University of Athens, in the session “**Layers of Evidence: Decoding Conflicts, Cities and Landscapes.**” We shared our work on citizen science and public participation in landscape governance, focusing on the Falasarna case study in Crete. Our presentation highlighted how TOPIO combines geoinformatics, Earth Observation, AI, and participatory methods.
